

## 2 Steps in Fighting Discomfort of COLDS

ENTERS BODY THROUGH NOSE, STOMACH AND INTESTINES TO RAISE PAIN

2. RELIEVES THROAT PAIN, RHEUMATISM

No family need neglect even minor head colds.

Here is what to do: Take two "Aspirin" tablets when you feel a cold coming on—will keep you free of water. Then report, if necessary, according to directions in each package. Relief comes rapidly.

The "Aspirin" method of relief is the way many doctors now approve. You take "Aspirin" for relief—then you are not improved enough, you still feel badly.

● "Aspirin" tablets are made in Canada. "Aspirin" is a registered trademark of the Bayer Company, Limited, of Windsor, Ontario. Look for the name Bayer on the form of a cross on every tablet.

Demanded and Got "ASPIRIN"

## Opinion Of Health Authority

People Eat Improper Food And Too Much Of It

The average man should be able to live to at least 60 years of age, and proper diet should bring about this lengthening of the life span, Dr. Victor G. Heiser, United States public health authority and author, said at Montreal.

"We have increased the average life span already," Dr. Heiser told reporters, "but we have increased the average only by cutting down infantile and child mortality. We have not increased the actual span of life very much. The man of between 35 and 40 today stands a better chance of dying as he did 100 years ago."

Next great task of medical science will be to keep man from committing suicide as he does at present, said the doctor, adding that he intended to devote the remainder of his life to the study of diet.

In Montreal to address the Women's Canadian Club, Dr. Heiser responded to reporters on the importance of diet. He told how Sir Robert McCarrison in England fed 1,000 rats a balanced diet for two years and fed a similar number the same kind of food as the people in his English town. He killed the rats and made a post-mortem examination of each. There was no sign of disease or organic disorder in the rats which had eaten "just what they wanted," had all the diseases to be found in a human hospital.

"They had enlarged adenoids, gastritis, had tonsils, arthritis—all the diseases common to the people of the neighborhood," said Dr. Heiser.

"This bears out my belief," he said, "that the average man eats at least twice as much as he needs, and that the excess food acts just as excess fuel does on a boiler. It wears him out."

Man's fight against disease knows no national boundaries, he said in his closing address. Public health authorities all over the world fought shoulder to shoulder against disease.

## Nearing End Of Growth

Hill's Boy Is Tallest Human In Medical History

Robert Wadlow, of Alton, Ill., tallest human in medical history, who has observed his 20th birthday, is nearing the end of his phenomenal growth, according to physicians. Measurements revealed Wadlow is 8 feet 11 inches tall, weighs 465 pounds. Records examined showed the youth's rate of growth in the first four years has diminished only half inch each year. He grew only one and a half inches last year. Between the ages of nine and 12 he averaged from four to five inches of growth each year.

"People on the Pacific coast are at last getting an answer to that old question, 'Where do the salmon go?' It seems that they go into a floating Japanese salmon cannery."

## Royal Air Force

Britain To Make A Stronger Bid For International Air Traffic

Great Britain is to make a bolder bid for international air traffic. Concurrently with the upbuilding of the Royal Air Force, the government announced it will give increased stimulus to civil aviation. Measures are to be taken within the air ministry to strengthen the organization dealing with civil aviation.

State subsidies to air transport companies, now fixed at a maximum of £1,500,000 (\$7,500,000), are to be doubled. External routes are to be allocated Imperial Airways and British Airways. The administration of both companies is to be reorganized.

The government's decision is based on a report of a special committee of inquiry into civil aviation of which Lord Cudman was chairman. The committee's report was released, together with the government's action on it.

The report, in recommending the enlarged subsidy, said it is designed to expand commercial air lines, including those of the West Indies and South America, but left it to the government and the companies concerned as to what routes would be developed.

The committee lays down the principle, and the government agrees, that the British air line is to be one of a single coin—and that the military aspect of aviation fundamentally cannot be separated from the civil aspect.

In a reorganization of the air ministry, a permanent under-secretary of state for air is to be appointed to exercise the general administrative direction of civil aviation. He will be charged with the duty of full constant correlation of policies of civil and military aviation.

Lord Cudman's committee recommended the higher control of the department of civil aviation must be strengthened, that there must be more vigor in initiating policy and more foresight in planning.

The government has decided to add a deputy director-general of aviation, with a director of civil research production, selected for technical and general qualifications. The director of civil research will be responsible for ensuring that the civil aspects of research, development and production be given full consideration.

## Saskatchewan School Trustees

Annual Meeting Of Association To Be Held In Moose Jaw In 1939

The annual convention of the Saskatchewan School Trustees' Association will be held in Moose Jaw in 1939 according to a letter received by the Moose Jaw board of education. The convention will be held some time in February, exact dates have not been set, and it is expected about 1,000 delegates will attend the gathering.

## Market For Woolen Tissues

Canada, in 1937, was the chief market for woolen tissues exported from Great Britain, importing 17,700,000 yards, as compared with 15,300,000 square yards in 1936. Second place was taken by Argentina. In imports of wool "tissue" from Great Britain in 1937, the chief market was Germany, Elze (Irish Free State) was second, and Canada third.

H. J. Bull, a 60-year-old green grocer, of Folskott, Eng., has broken a record for successive daily bathtubs in the sea. Not for 3,686 mornings—over ten years—has he failed to have his early-morning swim.

In Naples, Italy, street vendors serve steaming hot spaghetti at a nominal charge of five cents. The vendor serves a plateful, which he then cuts and serves by the customer.

## Why Deer Shed Antlers

Problem That Has Puzzled Hunters And Scientists

The problem of how and why deer shed their antlers yearly and what becomes of the discarded appendages is one that lends itself to a great deal of speculation. As the problem is a complex one, and considerable theorizing among scientists. As a result of knowledge gained by practical experience, as well as the results of laboratory and field research work, by scientists the various stages of antler development and discard are fairly well known while the natural changes which take place have been closely studied and explained by those best able to do so.

The subject has been brought to our attention once more by receipt of a letter from Oversee Sheppard of Ganouque in which he advises that on January 28 he found a pair of antlers on the ice surface of Charlotte Lake. The antlers, according to the report, were from a six-year-old buck, and were found lying about 100 yards apart. As the surface of the lake was covered with glare ice, a condition which came a day or two previously, and the antlers were found in the snow, it was assumed they were shed by the deer about the time they were found.

The antlers, which were in the late stage, may or may not be unusual—it has been generally believed that they are cast in the early part of January, although a number of factors such as climatic conditions and vitality of the deer may vary the time of shedding. It is not unusual to find a pair together, and in first class shape. There were signs that the deer had been feeding on the antlers, and it is probable that the resultant cast probably completed the dislodging process.

It has always been a mystery to hunters why so few of these relics of an interesting natural occurrence are found in the wild, in view of the vast numbers that are cast off annually. The generally accepted opinion is that they are eaten by such rodents as squirrels, rats, mice, etc., who find them quite palatable at this time of the year when other food is scarce.

It is quite probable, also, that many of them become covered by leaves and so are unobserved, particularly in view of the fact that they have a strong resemblance to dead branches. Under such conditions they no doubt disappear quite rapidly because of their composition.

In any case few are found in the woods and the mystery of their disappearance is as puzzling as are many of the other queer things that happen in view of the creature's life, such as cycles of abundance and scarcity.

## Proud Of Her Name

Native Woman In South Africa Called Queen Victoria

In court at Cape Town the other day the public prosecutor ordered: "Call Queen Victoria." A native lady charged with assaulting his wife. The orderly walked to the door and cried: "Queen Victoria!" The gallery giggled and necks craned. Particularly in view of the fact that a small plump native woman dressed brightly in green, black and yellow. She wore her hair in a bun and a crown. She leaned on a thick black stick. Imperiously she hobbled into the court room, her head held high, she stood in the witness box and announced haughtily: "I'm Queen Victoria."

A corn-busking machine can hush over 70 buehals an hour, which is way ahead of the record of champion buskers.

The Sahara desert is a tableland with a mean elevation of 1,500 feet and has mountains 9,000 feet high.

Chinese experts can make the tails of their lions flare after the air by manipulating the strings.

## HEALTHY CHILDREN

Happy Happy CHILDREN

CHILDREN of all ages thrive on "CROWN BRAND" CORN SYRUP. It's the only food that gives them the energy and vitality they need to grow. It's the only food that gives them the energy and vitality they need to grow. It's the only food that gives them the energy and vitality they need to grow.

THE FAMOUS ENERGY FOOD

THE CANADA SYRUP COMPANY

Something Really New

Girl In Montreal Received Fried Egg For Valentine

Love has many languages. There is the language of the sweet nothings, the language of the sweet talk. There is the language of the eyes. Crooners on the radio and in the movies murmur for lovers in still another tongue. There is the old-fashioned language of flowers, the language of carrying in message, and the language of postage stamps—if the stamp is stuck upside down on the envelope it means one thing—love.

Queerest of all love languages is the one which came to light on St. Valentine's Day, when a woman in New England town wanted to send an affectionate greeting to his sweetheart in Montreal. It is the language of the egg.

This original lover sent a money-order to the Canadian National Telegraphs to cover the cost of a telegram and the delivery of one fried egg.

It seemed mad to the telegraph people, but they are used to handling strange communications and they were not to be stampeded. The egg was bought, a restaurant fried it and the telegraph messenger started out with his precious message. The news peddler's bicycle as rapidly as his fearfulness would allow, balancing the egg in one hand, and delivered it unbroken and sunny-side up.

What its significance was, no one knew but the delighted girl who received the Valentine and the lover who sent it.

## New Piano Invention

Musician Can Play Scale Of Octaves With One Hand

Appearing with the Toronto symphony orchestra, Miss Winifred Christie, Scottish pianist, played a new type of piano with two keyboards. She was the inventor of the Moor, on which two octaves can be played with one hand. Moor's piano, fitted with a coupling pedal, is capable of several other easements for the fingers of the pianist, Miss Christie said. For example, she pressed the coupling pedal and played the keyboard to the lower, and instead of a scale of single notes played with her right hand, by striking single keys she produced a scale of octaves.

Mrs. de Gans: I was outspoken in my sentiments at the club to-day.

Mr. de Gans (with look of astonishment): I can't believe it, now. Who outspoke you?

## A Profitable Industry

New Brunswick Has Largest Fox Ranch In British Empire

In 25 years the fox breeding industry has transformed the Weymouth County community of Salisbury, New Brunswick, from a drab hamlet into a bustling village where per capita wealth is greater perhaps than in any other rural part of New Brunswick.

The 25-mile radius around Moncton, a district including Salisbury, is said to contain more foxes than any other area of the same size in the world. In this district is the largest fox ranch in the British Empire, that of Mr. M. G. Galt, M.L.A., who runs from 3,000 to 4,000 silver black fox each year.

Years ago a good silver black fox pair sold for \$2,500. Business circles could only dream of owning a silver fox necktie. Now they can buy one. Wealthy women who used to have fox scarves now have full-length wraps made from matched pelts.

Ranchers who once produced only a few pelts have so multiplied production that a silver black scarf is now a luxury worth its weight in gold. Instead it is within the scope of the average woman's pocket although no less beautiful than before.

The industry has settled down to a steady pace. Prices have remained the same year to year and offer good profits to efficient ranchers who have enough stock to carry their overhead. These breeders cannot profits during the depression.

The Galt's ranch has its own private factory where hancuts are manufactured for the animals. Rabbits for feed are bought in carload quantities. The hancuts are made by hand and have supplanted hit-or-miss method of 20 years ago when a man paid a small fortune for a pair of breeders and other breeders or became wealthy.

## Canada's Major Oil Field

British Empire Has A New Source Of Oil In The Turner Valley

Canada's Major Oil Field was the subject of an illustrated lecture by the Hon. J. Hume of the Geological Survey, Department of Mines and Resources, to an audience at the National Museum at Ottawa.

Dr. Hume said oil was one of our vital resources, as it was used to produce the wheels of the world. The British Empire had a new oil field in Turner Valley, Alberta. After 23 years of exploratory drilling with much production of natural gas and naphtha, crude oil was produced in June, 1936, when the Turner Valley Royalties well was drilled. The new well had an initial flow of 850 barrels a day. This encouraged additional drilling, with the result that Turner Valley has now a potential production per day of 30,000 barrels of high grade oil, particularly suited for the making of gasoline.

At the conclusion of the lecture, the film "Canada's Major Oil Field" was shown. This film was taken by Dr. Hume last summer, and shows the various steps in the locating, drilling and production of oil in Turner Valley.

## First Grade Fir Timber

B.C. Supply Will Soon Be Exhausted

State Forestry Officials—Every few days one of the upland reports reports the departure of a deep-sea freighter loaded with one best fir logs, going out of the province as unmanufactured lumber to supply raw material for mills and labor in foreign countries. This export is at the expense of our own industry and labor. It is proceeding while our forestry officials are warning that we have only a dozen years left to supply of first-grade fir timber left.—Victoria Daily Times.

Allapice is the dried, unripe fruit of the pimento tree.

## Another Wonderful Cave

Accidentally Discovered In New Mexico By Sheep Rancher

Discovery of a magnificent limestone cavern, with one vaulted chamber more than three miles long, has been reported at Carlsbad, New Mexico.

The great cave, said R. P. Burnett, curator of the Carlsbad Museum, rivals in beauty the famed Carlsbad Cavern, and may be the largest in the world.

Carlsbad Cavern and another near Mexico City now vie for the title of the world's largest "hole in the ground." Neither has been explored thoroughly.

The party pushed a small party of explorers through the hill, hidden entrance, deep in the Guadalupe Mountains, twelve miles south of Carlsbad Cavern.

They found themselves in an immense underground room 700 feet wide and with a ceiling so high it could not be seen, even by the aid of powerful flashlights.

The party pushed on for six hours, covering an estimated three miles. Only when the chamber came to a sharp curve did they turn back, fearing that they might become lost in the labyrinth.

Huge, snow-white stalagmites, larger even than the 100-foot monoliths of Carlsbad Cavern, dotted the floor. Ancient Indian pottery and the bones of deer gave evidence that the cave once had been used for human occupancy.

Tom Twacher, a sheep rancher, stumbled onto the cave's entrance, 700 feet up the steep side of a mountain and concealed by a jutting rock.

## Bridge Builder

Man Who Originated Vertical Lift

Dr. John Alexander Wood Wadell, 84, engineering authority credited with originating the modern vertical lift bridge, died at his New York apartment after a short illness. He was born at Port Hope, Ont.

Dr. Wadell designed and constructed more than 70 lift bridges in this country and abroad. He was decorated by the Chinese, Italian, Japanese and Russian governments.

## Need Building-Up?

WHEN you feel out-of-sorts, when you're no appetite, or stomach gives trouble, with acid or acid indigestion, try Dr. Pierce's Golden Medical Discovery. Try it. Read what Dr. J. C. Williams, of New York, says: "I have used Dr. Pierce's Golden Medical Discovery for many years. It has cured me of all my ailments. I have used it for many years. It has cured me of all my ailments. I have used it for many years. It has cured me of all my ailments."

"I had to fire an old employee to-day. I felt sorry—but sentiment has no place in your business."

"What is your business, may I ask?"

"Oh, I manufacture all sorts of holiday and greeting cards."

The Japanese bomb is the largest coin in the world. It measures five inches across and weighs about four ounces.

## JOYS AND GLOOMS

**O.S.A. EXPERIMENTAL UNION 1938**

The Olds School of Agriculture Experimental Union again has available for distribution to its members some excellent seeds and plants of field and garden crops. These are listed below. Each member may make from one to four selections.

Anyone interested may become a member of the Experimental Union by paying an annual membership fee of fifty cents. Members of the O. S. A. Alumni Association may make selections without fee.

Potatoes, four pound samples, Vicks Early, Potatoes, four pound samples, Bovee, Potatoes, four pound samples, Warba (early), Potatoes, four pound sample, Kathadi (late), Fairway Crested Wheat, half pound, Creeping Red Fescue, half pound, Two ribbed plants, Twenty asparagus roots, Three climbing ornamental plants, Three climbing plants, Three climbing plants, Five perennial flower roots, Five packets home grown flower seeds, Collection home grown vegetable seeds, five, Caragana seedlings, Crab seedlings (ornamental), Four varieties of garden peas.

The supply of this material is quite limited, some substitution may be necessary. A limited amount of seed of a number of the leading varieties of wheat, oats, barley and peas but nothing strikingly new. Members who are interested are asked to write. Orders will not be accepted after April 11th.

Membership fees of 50 cents must accompany selection. Express or postal charges amount to approximately fifty cents—this should be paid at the same time. Where there is no railway agent, shipping charges must be prepaid. Report forms must be filled in and returned to the O.S.A. at the end of growing season.

When you have any news send it to The Call. We want it and so do all our readers.

Mrs. Macdonald, wife of M. W. Macdonald formerly of Arrowwood, barrister at McLennan, Alberta died suddenly Monday at her home there. She had resided for some years in Arrowwood and was well known before moving to McLennan seven years ago. She is survived by her husband and two children.

Talk about the benefits of advertising. Down in Florida not long ago a family, as a child which they supposed had strayed away from home and got lost. After searching in vain for three days the frantic parents placed an advertisement in the nearest newspaper. Imagine the surprise of the parents upon going to the door the next morning to see a monster alligator upon the doorstep where he had disgorged the child alive and then died himself. The ad cost them but a few cents, but it gave them back their child; they sold the alligator hide for \$5 and the parents are showing the child in all the museums of the land at \$50 per week. Does advertising pay?

Although fifteen odd varieties of barley are raised in Canada, there is one variety which is recognized by authorities as complying most adequately with the distinctive requirements of the brewer. The story of the cultivation barley, known as O.A.C. 21 and its application to the brewing industry is interesting. The essential quality which distinguishes good barley for brewing purposes is the ability of the diastase, or soluble ferment of the barley, to transform the starch into dextrin and maltose more completely than an inferior diastase. When the soil lacks the qualities necessary for the production of the grade of barley demanded, chemical fertilizers are introduced into the soil to supply the deficiencies in nature.

There will be a story for the children entitled, "Fifty-seven pennies."

**MUSIC FROM A MEMOR**

More than a thousand years ago a barber discovered that, in moving his mirror, air was forced through the tubes which were common in mirrors at that time. This caused a curious musical sound to be emitted. So struck was he by this peculiarity that he set about making an instrument which was the foundation of the modern organ. After several experiments he made a waterlute in which air was forced by bellows through an inverted cone which led to flutes controlled by a keyboard, the pressures being kept uniform by water.

After a thousand years a rival instrument made its appearance. This was of similar pattern, but instead of water, weights regulated the pressure.

In 1901 an organ was erected at Weychester, England. It had twenty-eight bellows and ten pipes to each key. Two men who sat at the keyboard "blew and sweated enormously." Later, a firm of organ makers in Germany succeeded in erecting the first really big instrument. The primary stops did not differ very much from those of today, although various novelties were introduced.

Among the innovations were the nightingale and cuckoo stops, which others represented clock-crowing or goat-bleating. Though these novelties have now fallen into disuse, the organ with one of these nightingale stops is still to be seen in Rome.

It was not until the nineteenth century that the problem of the regulation of air pressures was solved by the introduction of the hydraulic blower.

Raising of the speed maximum from 20 to 25 miles per hour in towns and villages is provided for in a bill.
